

WINVaccs is the **Immunisation** module of the **Community Services Suite**. A powerful yet easy to use system which has been specifically developed to meet the needs of those responsible for delivering Immunisation services.

The Immunisation module of the Community Services Suite has been developed to cost effectively address the needs of immunisation providers such as Councils, hospitals, medical centres etc, and is the most widely used system of its type throughout Australia.

The screenshot displays the 'Immunisation - (Lgsssim) - [Immunisation Details - Sanderson, Mstr Paul]' window. The interface includes a menu bar (File, Immunisation, Administration, Settings, Batch, Import, Reports, Window, Help) and a toolbar with icons for search, patient, consent, and other functions. The main form contains the following fields and sections:

The Health Insurance Commission (HIC) has accredited Xpedite as a Licensed Supplier of Immunisation Software.

Major features at a glance:

- Efficient entry and storage of an extensive range of Infant/Child/Adult details. All immunisation sessions display immunisation history recorded and recommended vaccines.
- The Session diary, an essential tool for management of sessions including Reminders
- Easy to use with coloured buttons and screens
- Efficiently manage the ordering and dispensing of Vaccines and Consumables by tracking stock orders, stock on hand, dispensing of stock and stock returns.
- Ability to record Reactions to vaccines and Warnings – easily seen on the screen
- Record Vaccinations by GP or other Health Services (outside Council).
- Includes a responsive on-going maintenance program to reflect any changes in statutory requirements and the National Immunisation Program Schedule.
- Record Batch (multiple) immunisations and consent.
